But if you have done that, you will have to wait a little while each time you visit a file in that mode, while Emacs finds all the definitions in that buffer. When you change the contents of a buffer, if you add or delete definitions, you can update the buffer's index based on the new contents by invoking the ' \*Rescan\* ' item in the menu.

GNU Emacs Lisp Reference Manual: Advising Functions : 17.

Advising Emacs Lisp Functions . The advice feature lets you add to the existing definition of a function, by advising the function. This is a clean method for a library to customize functions defined by other parts of Emacs--cleaner than redefining the whole function.

Emacs treats each X server as a separate terminal, giving each one its own selected frame and its own minibuffer windows. However, only one of those frames is "the selected frame" at any given moment, see 29.9 Input Focus. A few Lisp variables are terminal-local; that is, they have a separate binding for each terminal. The binding in effect at any time is the one for the terminal that the currently selected frame belongs to.

### **GNU Emacs Lisp Reference Manual: Frames**

The evaluation of expressions in Emacs Lisp is performed by the Lisp interpreter---a program that receives a Lisp object as input and computes its value as an expression. How it does this
