Diabetes - HealthXchange Home

Type 1 diabetes (T1D) is usually diagnosed in children and young adults and affects just 5% of all individuals with diabetes. However, it may also present in older adults. In type 1 diabetes, the body is unable to produce insulin. The body breaks down the sugars and starches into simple sugar known as glucose, which is required for energy.

Essential Guide - HealthXchange Home

Diabetes is one of the most dangerous diseases out there. While things like cancer can certainly be serious, diabetes is a long-term condition that can bring about a wide range of health issues ranging from loss of limbs to heart failure and beyond. In short, it's something that has to be treated and managed properly in order to live the longest, healthiest life possible.
